

## SoundPoint® Pro

SoundPoint Pro desktop conference phone combines Polycom's corporate-quality audioconferencing with a full business feature set for the small office, home office, or small business environment.

Fully-featured Conference Phone: Professional, full-duplex audioconferencing anytime! The front microphone is optimized for high-quality individual conferences with minimal background noise. Activate the rear microphone with a simple key press, for group conferencing with 360° coverage. And with SoundPoint Pro you can have up to a 4-way unassisted conference right from your desktop!

Three Modes of Operation: Use SoundPoint Pro with the handset, in speaker mode, or attach a headset with SoundPoint Pro's integrated headset amplifier and controls! You can change modes seamlessly at any time, with a touch of a key or by lifting the handset.

Full Business Feature Set: SoundPoint Pro's full business feature set enhances audioconferencing and maximizes productivity.

## SoundPoint®

SoundPoint and SoundPoint PC deliver full-duplex business quality audioconferencing capability to your desktop or office. For conferencing alone or in a group, desktop video conferencing, or Internet Telephony.

- Full duplex audioconferencing for the desktop or office
- Full duplex audioconferencing for videoconferences and Internet Telephony

## SoundStation Premier® EX

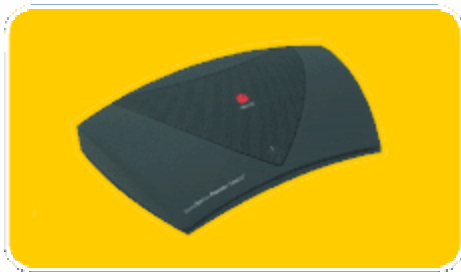

SoundStation Premier sets a new standard in full-duplex audioconferencing quality. Incorporating Polycom's revolutionary echo cancellation and noise reduction technology, SoundStation Premier virtually eliminates echoes and reverberation. In addition, the exceptionally sensitive hypercardioid microphones and intelligent microphone mixing minimizes background noise, allowing you to effectively zero in on meeting participants as they are speaking, even in a room full of people.

Premier's automatic gain control lets people move about at will, without worrying about being heard. Also the system's neodymium speaker provides clear, high fidelity sound with enough volume to fill almost any size room.

Complementing its unequalled sound quality, SoundStation Premier also delivers unsurpassed convenience with a 16-character LCD for Caller ID capability, time of day, and length of call. The console, featuring hold, redial, and mute buttons, connects to a wall module via a single cord which reduces clutter. An optional infrared remote controlled, wireless microphone system and extended microphones with separate mute buttons allow participants to move freely about the room.

## SoundStation Premier® Satellite

The SoundStation Premier Satellite is a unique, enhanced sound system that works in conjunction with Polycom's top-of-the-line SoundStation Premier conference phone to provide full-duplex audioconferencing with unparalleled expandability.

SoundStation Premier Satellite extends microphone pick-up to cover even the very largest conference room by combining SoundStation Premier's three directional microphones and two optional extended microphones, along with Satellite's two optional extended microphones and optional wireless lapel microphone, for a total of up to eight optional microphones. The Satellite unit has a high-quality rare earth neodymium speaker that, when combined with the speaker from the SoundStation Premier, provides sound to fill the largest room.

The Satellite's optional wireless microphone's NiCad battery can be automatically recharged by placing it in the docking station. This high-performance 900 Mhz wireless microphone selects one of five different channels to provide secure and optimal transmission in all environments.

## **StreamStation™**

The Polycom StreamStation™ provides an easy-to-use solution for holding live Webcasts and creating on-demand World Wide Web streaming content.

With the press of a button, any user can now create streaming media content that can be viewed with either the Microsoft Windows® Media Player or RealNetworks® RealPlayer™ G2.
